SUMMARY

- Passionate, product-oriented software engineer who cares about code, quality, and great user experience
- Development of native mobile apps for iOS since 2011
- I enjoy debugging weird UIKit and SwiftUI related bugs, profiling and improving performance
- Experience with the whole development process, from specification through the design to The App Store
- Experience with automated testing, build automation, Continuous Integration and Delivery ([Fastlane](#))
- Experience with ticketing and mobile payments
- Experience in working with remote teams, lean startups, scrum, kanban
- Self learner: WWDC videos, blogs, contributor to OSS [GitHub](#) and [StackOverflow](#)
- Former co-organizer of CocoaHeads meetup in Prague

WORK EXPERIENCE

[IdeasOnCanvas](#) - [MindNode](#) - Senior Software Engineer (contract, remote)

2019 - now, Vienna (AT)

In a team of senior iOS and macOS engineers, I work on new features as well as maintaining existing code-base, ensuring high degree of quality and low technical debt. My work focuses on developing UI, fixing bugs, improving performance.

Tech: ObjC, Swift, AppKit, UIKit, SwiftUI, StoreKit 2

Released apps and open source projects:

- [MindNode Next](#) - Mind-mapping app for iOS, macOS, and visionOS
- [MindNode](#) - Mind-mapping app for watchOS, iOS, and macOS
- [Aiolos](#) - A floating panel for your iOS Apps

[GoOut](#) - Lead Software Engineer - iOS

2016 - 2018, Prague (CZ)

My responsibility was to design, develop, and successfully release the first iOS app for GoOut. GoOut is a culture guide, ticketing system, and social network. I was a key part of the agile development process, involved in estimating, planning, and design. My role included researching and designing new features, integration analysis, API design, integration with Payment Service Providers (PayU, Paymill), profiling and fine-tuning app performance, and finally maintenance. Last, as the most senior engineer on the team, was mentoring other developers, helping them to build better software on Android and the backend, doing code review and providing feedback.

Tech: Swift 3-4, CoreData, Realm, ReactiveSwift, MVVM-C, CI, Fastlane, I10n/i18n, push notifications, XCTest, XCUITest, GCD, HTTPS, REST, JSON

Released apps:

- [GoOut - Best Events Wherever You Are](#) - culture guide, ticketing system, and social app with 15k MAU

[Mailcloud](#) - Senior Software Engineer - iOS

2014/10 - 2015/10, London (UK)

Mailcloud is a cloud storage, email client and chat, all in one app. As a full-time on-site engineer, my goal was to transform an early prototype developed by an in-house team into a full, fast, and reliable application. I was a key part of the agile development process, involved in estimating, planning, and design. My role included researching and designing new features like chat, integration analysis with existing systems, implementation, and profiling performance.

Tech: Swift 1-2, ObjC, CoreData, GCD and multithreading, iOS 8, Dynamic Frameworks, HTTPS, REST, JSON, CryptoSwift, SQLite, SSL pinning

Released apps:

- [Mailcloud - File Manager with Cloud Storage](#) (not in AppStore anymore)

CellPoint Mobile ApS - Full-stack mobile and backend app developer **2012 - 2014/10, Copenhagen (DK)**

Full-stack mobile and backend app developer. Responsible for iOS app development from initial client meetings, ideation, and prototyping through requirement specification, system integration to the App Store. My work also included implementation of backend for services like mRetail and mPoint providing payment processing and server support for mobile clients. Worked on apps used by 100 000s of MAU. CPM provides commerce orchestration infrastructure for clients like Emirates, Danish Railways, and PizzaHut.

Tech: iOS SDK, Objective-C, SQLite, PHP, XML, XSL, XSD, PostgreSQL

Projects:

- KARLA - concept of an iOS application for KARLA restaurant allowing users to book, order and pay for meals and drinks on their phones.
- [ValetParker](#) - concept of an iOS application allowing users to pay for parking on their phones
- [DSB WildCard](#) - ticketing iOS application allowing users to purchase loyalty card and tickets for trains, over 25.5k monthly active users

Inmite s.r.o. (Avast Mobile) - iOS Developer**2011 - 2012, Prague (CZ)**

Worked remotely as a iOS developer. Inmite was one of the biggest Czech agencies developing applications for mobile devices with clients like Vodafone, Google, Czech Television. Inmite was acquired by Avast Software in 2014.

Technologies: iOS SDK, SVN, XML, JSON

Projects:

- [Vodafone galerie](#) - Entertainment application for customers of the Czech branch of mobile network operator Vodafone
- [Europa 2 NEW!](#) - Internet radio player application

DH System s.r.o. - PHP developer**2009, Brno (CZ)**

Worked remotely in a team of software developers as a PHP developer. Focus on designing and coding user interface as well as implementing business logic.

Project: DH MODEL - SaaS tool for rating quality of processes in a company according to the European Excellence Model - EFQM.

Technologies: PHP, HTML, CSS, Nette framework, dibi, jQuery, Firebird, Git, SVN

EDUCATION**Technical University of Denmark****2011 - 2014**

Program: [Digital Media Engineering](#), study line Web 2.0 Services and Mobile Applications

Academic Degree: Master of Science

Projects: [Mind the Checkout](#) - iOS application, location based reminder for iPhone

Master project: Mobile Sensing for iOS - iPhone application tracking user's movement, wifi networks, etc.

Main Subjects:

- Mobile Application Prototyping
- Personalization and Metadata Models
- Agile Digital Media Development
- Machine Learning and Data Modeling
- User Experience Engineering
- Cognitive Science
- Advanced iOS Application Development
- System Integration

VŠB - Technical University of Ostrava**2007 - 2011**

Major: Information and Communication Technology with focus on Computer Science and Technology

Academic Degree: Bachelor of Science

Bachelor project: Development of Online Booking System in PHP for golf indoors (in a collaboration with company Brain Computers)

Main subjects:

- Processor Architecture, Low Level and Realtime Systems in Assembler/C
- Programming in C# and C/C++
- User Interfaces

HOBBIES

- Coffee - love for good coffee taught me how to brew using Aeropress, dripper and espresso machine
- Kiting, snowboarding, skiing, mountain biking, running
- Golf (Just started, handicap 45)
